

ROUNDHILL T-REX 2X LONG DRAM DAILY TARGET ETF

PROSPECTUS
June 24, 2026

This prospectus describes the Roundhill T-REX 2X Long DRAM Daily Target ETF (the “Fund”) which is authorized to offer one class of shares by this prospectus.

The Fund seeks daily long leveraged investment results and is intended to be used as short-term trading vehicle.

The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. The Fund is very different from most mutual funds and exchange-traded funds. Investors should note that:

(1) The Fund is riskier than alternatives that do not use leverage because the Fund magnifies the performance of its underlying security.

(2) The pursuit of its daily investment objective means that the return of the Fund for a period longer than a full trading day will be the product of a series of daily leveraged returns, for each trading day during the relevant period. As a consequence, especially in periods of market volatility, the volatility of the underlying security may affect the Fund’s return as much as, or more than, the return of the underlying security. Further, the return for investors that invest for periods less than a full trading day will not be the product of the return of the Fund’s stated daily leveraged investment objective and the performance of the underlying security for the full trading day. During periods of high volatility, the Fund may not perform as expected and the Fund may have losses when an investor may have expected gains if the Fund is held for a period that is different than one trading day.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Investors in the Fund should:

- (1) understand the risks associated with the use of leveraged strategies;
- (2) understand the consequences of seeking *daily leveraged* investment results; and
- (3) intend to actively monitor and manage their investments.

Investors who do not understand the Fund, or do not intend to actively manage their funds and monitor their investments, should not buy the Fund.

There is no assurance that the Fund will achieve its daily leveraged investment objective and an investment in the Fund could lose money. The Fund is not a complete investment program.

The Fund’s investment adviser will not attempt to position the Fund’s portfolio to ensure that the Fund does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, if the Fund’s underlying security moves more than 50% on a given trading day in a direction adverse to the Fund, the Fund’s investors would lose all of their money.

ROUNDHILL T-REX 2X LONG DRAM DAILY TARGET ETF

IMPORTANT INFORMATION ABOUT THE FUND

The Roundhill T-REX 2X Long DRAM Daily Target ETF (the “Fund”) seeks daily leveraged investment results and is very different from most other exchange-traded funds. As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund’s objective is to magnify (200%) the daily performance of the publicly-traded shares of Roundhill Memory ETF (Cboe: DRAM) (“DRAM”). The return for investors that invest for periods longer or shorter than a trading day should not be expected to be 200% of the performance of DRAM for the period. The return of the Fund for a period longer than a trading day will be the result of each trading day’s compounded return over the period, which will very likely differ from 200% of the return of DRAM for that period. Longer holding periods, higher volatility of DRAM and leverage increase the impact of compounding on an investor’s returns. During periods of higher DRAM volatility, the volatility of DRAM may affect the Fund’s return as much as, or more than, the return of DRAM.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (2X) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single day, the Fund will lose money if DRAM’s performance is flat, and it is possible that the Fund will lose money even if DRAM’s performance increases over a period longer than a single day. An investor could lose the full principal value of his/her investment within a single day if the price of DRAM falls by more than 50% in one trading day.

Investment Objective

The Fund seeks daily investment results, before fees and expenses, of 200% of the daily performance of DRAM. **The Fund does not seek to achieve its stated investment objective for a period of time different than a trading day.**

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fee ⁽¹⁾	1.50%
Distribution (12b-1) and Service Fees	0.00%
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses ⁽³⁾	1.50%
Less Fee Waivers and/or Expense Reimbursements ⁽⁴⁾	(0.25)%
Total Annual Fund Operating Expenses After Fee Waivers and/or Expense Reimbursements	1.25%

⁽¹⁾ Under the Investment Advisory Agreement, Tuttle Capital Management, LLC (the “Adviser”), at its own expense and without reimbursement from the Fund, pays all of the expenses of the Fund, excluding the advisory fees, interest expenses, taxes, acquired fund fees and expenses, brokerage commissions and any other portfolio transaction-related expenses and fees arising out of transactions effected on behalf of the Fund, credit facility fees and expenses, including interest expenses, and litigation and indemnification expenses and other extraordinary expenses not incurred in the ordinary course of the Fund’s business.

⁽²⁾ Other Expenses are estimated for the Fund’s initial fiscal year.

⁽³⁾ The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example. The

total indirect cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is estimated to be 0.189% for the fiscal period ending May 31, 2027.

- (4) The Adviser has contractually agreed to waive its management fee to an annual rate of 1.25% of the average daily net assets of the Fund until September 30, 2027 and the Adviser may not terminate this arrangement prior to that date.

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your shares at the end of those periods. The example also assumes that your investment has a five percent (5%) return each year and that the Fund's operating expenses remain the same. The effect of the Adviser's agreement to waive a portion of its management fee is reflected in the example shown below for the first year. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Name of Fund	1 Year	3 Years
Roundhill T-REX 2X Long DRAM Daily Target ETF	\$127	\$450

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. As of the date of this Prospectus, the Fund has not yet commenced operations and therefore does not have any portfolio turnover information available.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its net assets (plus any borrowings for investment purposes) in financial instruments that are designed to provide, in the aggregate, 200% exposure to the price performance of DRAM on a daily basis. The Fund may also seek to achieve its investment objective by purchasing call options on DRAM or by investing directly in the shares of DRAM. The Adviser will determine the allocation of the Fund's investments in swap agreements, call options and direct investments in DRAM shares based upon various factors including, but not limited to, counterparty capacity, financing charges, liquidity, collateral availability, and overall market conditions for a particular instrument. Direct investments in shares of DRAM is typically less efficient than the use of swap agreements because direct investments in shares do not provide leveraged returns. This may result in the Fund not achieving its 200% daily investment objective.

The Fund will enter into one or more swap agreements with financial institutions whereby the Fund and the financial institution will agree to exchange the return earned on an investment by the Fund in DRAM that is equal, on a daily basis, to 200% of the value of the Fund's net assets. If the Adviser determines to use call options, the Fund will purchase exchange traded call options, including "FLEX Options." Call options give the holder (*i.e.*, the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (*i.e.*, the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. FLEXible EXchange® Options ("FLEX Options") are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter (OTC) options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Chicago Board Options Exchange. The Fund may take delivery of the underlying security (DRAM) if it chooses to exercise a call option and either hold or sell the security in the secondary markets.

The Adviser attempts to consistently apply leverage to obtain DRAM exposure for the Fund equal to 200% of the value of its net assets and expects to rebalance the Fund's holdings daily to maintain such exposure. As a result of its investment strategies, the Fund will be indirectly exposed to any industry in which DRAM is concentrated (*i.e.*, any industry in which DRAM holds 25% or more of its total assets).

The Fund will attempt to achieve its investment objective without regard to overall market movement or the increase or decrease of the value of DRAM. At the close of the markets each trading day, the Adviser rebalances the Fund's portfolio so that its exposure to DRAM is consistent with the Fund's investment objective. The impact of DRAM's price movements during the day will affect whether the Fund's portfolio needs to be rebalanced. For example, if the price of DRAM has risen on a given day, net assets of the Fund should rise, meaning that the Fund's exposure will need to be increased. Conversely, if the price of DRAM has fallen on a given day, net assets of the Fund should fall, meaning the Fund's exposure will need to be reduced. This daily rebalancing typically results in high portfolio turnover. On a day-to-day basis, the Fund is expected to hold money market funds, deposit accounts with institutions with high quality (investment grade) credit ratings, and/or short-term debt instruments that have terms-to-maturity of less than 397 days and exhibit high quality (investment grade) credit profiles, including U.S. government securities and repurchase agreements.

The Fund may invest in other exchange-traded funds for cash management purposes. Such exchange-traded funds may include The Laddered T-Bill ETF, a series of REX ETF Trust, which the Board of Trustees of the Fund has determined to be within the same group of investment companies as the Fund.

Generally, the Fund pursues its investment objective regardless of market conditions and does not generally take defensive positions. If the Fund's underlying security moves more than 50% on a given trading day in a direction adverse to the Fund, the Fund's investors would lose all of their money.

The terms "daily," "day," and "trading day," refer to the period from the close of the markets on one trading day to the close of the markets on the next trading day. The Fund is "non-diversified," under the Investment Company Act of 1940, as amended. Additionally, the Fund's investment objective is not a fundamental policy and may be changed by the Fund's Board of Trustees without shareholder approval.

DRAM is an ETF managed by Roundhill Financial Inc. DRAM seeks to invest primarily in the equity securities of "Memory Companies," but may also seek exposure to Memory Companies through derivative instruments, such as swap agreements and forward contracts. DRAM identifies Memory Companies as those companies with at least 50% of their revenues or profits attributable to the development or manufacturing of one or more of the following semiconductor memory products: (i) high bandwidth memory ("HBM") technology; (ii) dynamic random-access memory ("DRAM") technology; (iii) NAND (Not And) flash memory or solid-state drive ("SSD") technologies that utilize NAND flash; (iv) NOR (Not Or) flash technology; (v) Hard Disk Drives ("HDD"); or (vi) specialty and embedded memory. DRAM is listed on the Cboe BZX Exchange, Inc. DRAM is registered as an investment company under the Investment Company Act of 1940 and its shares are registered under the Securities Act of 1933. Information provided to or filed with the SEC by DRAM pursuant to the Securities Act can be located by reference to the SEC file number 333-273052 through the SEC's website at www.sec.gov. In addition, information regarding Roundhill Memory ETF may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding Roundhill Memory ETF from the publicly available documents described above. Neither the Fund, the Trust, the Adviser nor any affiliate has participated in the preparation of such documents. Neither the Fund, the Trust, the Adviser nor any affiliate makes any representation that such publicly available documents or any other publicly available information regarding Roundhill Memory ETF is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date of the prospectus (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of DRAM have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of, or failure to disclose, material future events concerning Roundhill Memory ETF could affect the value of the Fund's investments with respect to DRAM and therefore the value of the Fund.

Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of the underlying security over the same period. The Fund will lose money if the underlying security performance is flat over time, and as a result of daily rebalancing, the underlying security's volatility and the effects of compounding, it is even possible that the Fund will lose money over time while the underlying security's performance increases over a period longer than a single day.

The Fund may enter into swap agreements with a limited number of counterparties. If the underlying security has a dramatic move in price that causes a material decline in the Fund's NAV over certain stated periods agreed to by the Fund and the counterparty, the terms of a swap agreement between a Fund and its counterparty may permit the counterparty to immediately close out all swap transactions with the Fund. There is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund and, as a result, the Fund may not be able to achieve its leveraged investment objective or may decide to change its leveraged investment objective.

Principal Risks

An investment in the Fund entails risk. The Fund may not achieve its leveraged investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. In addition, the Fund presents risks not traditionally associated with other mutual funds and ETFs. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Effects of Compounding and Market Volatility Risk. The Fund has a daily leveraged investment objective and the Fund's performance for periods greater than a trading day will be the result of each day's returns compounded over the period, which is very likely to differ from 200% of DRAM's performance, before fees and expenses. Compounding affects all investments, but has a more significant impact on funds that are leveraged and that rebalance daily and becomes more pronounced as volatility and holding periods increase. The impact of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of DRAM during the shareholder's holding period of an investment in the Fund.

The chart below provides examples of how DRAM volatility and its return could affect the Fund's performance. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) DRAM volatility; b) DRAM performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) dividends or interest paid with respect to DRAM. The chart below illustrates the impact of two principal factors – volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of DRAM volatility and DRAM performance over a one-year period. Performance shown in the chart assumes that: (i) no dividends were paid with respect to DRAM; (ii) there were no Fund expenses; and (iii) borrowing/lending rates (to obtain leveraged exposure) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be different than those shown. Particularly during periods of higher volatility, compounding will cause results for periods longer than a trading day to vary from 200% of the performance of DRAM.

During periods of higher DRAM volatility, the volatility of DRAM may affect the Fund's return as much as, or more than, the return of DRAM. The impact of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of DRAM during a shareholder's holding period of an investment in the Fund.

As shown in the chart below, the Fund would be expected to lose 6.1% if DRAM provided no return over a one-year period during which DRAM experienced annualized volatility of 25%. At higher ranges of volatility, there is a chance of a significant loss of value in the Fund, even if DRAM's return is flat. **For instance, if DRAM's annualized volatility is 100%, the Fund would be expected to lose 63.2% of its value, even if the cumulative return for the year was 0%.** Areas

shaded red (or dark gray) represent those scenarios where the Fund can be expected to return less than 200% of the performance of DRAM and those shaded green (or light gray) represent those scenarios where the Fund can be expected to return more than 200% of the performance of DRAM. The table below is not a representation of the Fund's actual returns, which may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Daily Correlation Risk" below.

One Year	200% One Year	Volatility Rate				
Return	Return	10%	25%	50%	75%	100%
-60%	-120%	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	-100%	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	-80%	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	-60%	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	-40%	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	-20%	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%

50%	100%	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	120%	153.5%	140.5%	99.4%	45.9%	-5.8%

DRAM is newly launched and began trading in calendar year 2026. As of the date of this prospectus, DRAM does not have a track record of historical performance or daily volatility. Accordingly, no annualized performance or volatility data is available for prior years.

For information regarding the effects of volatility and performance on the long-term performance of the Fund, see "Additional Information About Investment Techniques and Policies."

Leverage Risk. The Fund obtains investment exposure in excess of its net assets by utilizing leverage and may lose more money in market conditions that are adverse to its investment objective than a fund that does not utilize leverage. An investment in the Fund is exposed to the risk that a decline in the daily performance of DRAM will be magnified. This means that an investment in the Fund will be reduced by an amount equal to 2% for every 1% daily decline in DRAM, not including the costs of financing leverage and other operating expenses, which would further reduce its value. The Fund could theoretically lose an amount greater than its net assets in the event of a security decline of more than 50%. This would result in a total loss of a shareholder's investment in one day even if DRAM subsequently moves in the opposite direction and eliminates all or a portion of its earlier daily change. A total loss may occur in a single day even if DRAM does not lose all of its value. Leverage will also have the effect of magnifying any differences in the Fund's correlation with DRAM and may increase the volatility of the Fund.

To the extent that the instruments utilized by the Fund are thinly traded or have a limited market, the Fund may be unable to meet its investment objective due to a lack of available investments or counterparties. During such periods, the Fund's ability to issue additional Creation Units may be adversely affected. As a result, the Fund's shares could trade at a premium or discount to their net asset value and/or the bid-ask spread of the Fund's shares could widen. Under such circumstances, the Fund may increase its transaction fee, change its investment objective by, for example, seeking to track an alternative security, reduce its leverage or close. In such circumstances, the Fund's investment adviser will consult with counsel to the Trust and its Board of Trustees, and if determined to be necessary, the Fund will

amend and/or supplement the prospectus as promptly as feasible under the circumstances to include appropriate disclosures.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, or funds (including ETFs), interest rates or indexes. Investing in derivatives may be considered aggressive and may expose the Fund to greater risks, and may result in larger losses or small gains, than investing directly in the reference assets underlying those derivatives, which may prevent the Fund from achieving its investment objective.

The Fund expects to use swap agreements to achieve its investment objective. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other investments, including risk related to the market, leverage, imperfect correlations with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty, liquidity, valuation, and legal restrictions. The performance of a derivative may not track the performance of its reference asset, including due to fees and other costs associated with it. Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of the amount initially invested. As a result, the value of an investment in the Fund may change quickly and without warning. Additionally, any financing, borrowing or other costs associated with using derivatives may also have the effect of lowering the Fund's return. Such costs may increase as interest rates rise.

Swap Agreements. Swap agreements are entered into with financial institutions for a specified period which may range from one day to more than one year. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a reference asset. Swap agreements are generally traded over-the-counter, and therefore, may not receive as much regulatory protection as exchange-traded instruments, which may expose investors to significant losses.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivatives portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy and the Fund may not achieve its investment objective. To the extent that the Fund exceeds the level of value at risk for an extended period, the Fund may amend and/or supplement its prospectus as promptly as feasible under the particular circumstances to include appropriate adjustments to its investment strategy and if necessary, the Fund's name.

Call Options. The use of call options involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility, which is affected by fiscal and monetary policies and by national and international politics, changes in the actual or implied volatility or the reference asset, and the time remaining until the expiration of the option contract and economic events. The values of the options contracts in which the Fund invests are substantially influenced by the value of the underlying instrument. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to expiry, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values of options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. As the options contracts are exercised or expire the Fund may enter into new options contracts, a practice referred to as rolling.

FLEX Options. The FLEX Options held by the Fund will be exercisable at the strike price only on their expiration date. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or using other recognized pricing methods. The value of the FLEX Options prior to the expiration date may vary because of related factors other than the value of the reference asset. Factors that may influence the value of the FLEX Options, other than gains or losses in the reference asset, may include interest rate changes, changing supply and demand, decreased liquidity of the FLEX Options, and changing volatility levels of the reference asset. FLEX Options are listed on an exchange; however, it is not guaranteed that a liquid secondary trading market will exist. In the event that trading in the FLEX Options is limited or absent, the value of the FLEX Options may decrease.

Counterparty Risk. A counterparty may be unwilling or unable to make timely payments to meet its contractual obligations or may fail to return holdings that are subject to the agreement with the counterparty. If the counterparty or its affiliate becomes insolvent, bankrupt or defaults on its payment obligations to the Fund, the value of an investment held by the Fund may decline. Additionally, if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the Fund may not be able to achieve its leveraged investment objective.

In addition, the Fund may enter into swap agreements with a limited number of counterparties, which may increase the Fund's exposure to counterparty credit risk. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund and, as a result, the Fund may not be able to achieve its leveraged investment objective or may decide to change its leveraged investment objective. The risk of a limited number of counterparties may be, and historically has been, particularly accentuated during times of significant market volatility. During times of significant market volatility, the costs to enter into the swaps that the Fund utilizes may increase significantly, which may negatively impact the Fund's returns. While the objective of the Fund is to seek daily investment results, *before fees and expenses*, of 200% of the daily performance of DRAM, it is important for investors to understand that significant increases in the costs of entering into the swaps may negatively impact investment results *after fees and expenses*.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a part of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with its investment objective. In these instances, the Fund may have investment exposure to DRAM that is significantly greater or significantly less than its stated multiple. The Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective, leading to significantly greater losses or reduced gains.

Intra-Day Investment Risk. The Fund seeks leveraged investment results from the close of the market on a given trading day until the close of the market on the subsequent trading day. The exact exposure of an investment in the Fund intraday in the secondary market is a function of the difference between the value of DRAM at the market close on the first trading day and the value of DRAM at the time of purchase. If DRAM gains value, the Fund's net assets will rise by the same amount as the Fund's exposure. Conversely, if DRAM declines, the Fund's net assets will decline by the same amount as the Fund's exposure. Thus, an investor that purchases shares intra-day may experience performance that is greater than, or less than, the Fund's stated multiple of DRAM.

If there is a significant intra-day market event and/or the securities experience a significant change in value, the Fund may not meet its investment objective, may not be able to rebalance its portfolio appropriately, or may experience significant premiums or discounts, or widened bid-ask spreads. Additionally, the Fund may close to purchases and sales of shares ("Shares") prior to the close of trading on the Exchange and incur significant losses.

Daily Correlation Risk. There is no guarantee that the Fund will achieve a high degree of correlation to DRAM and therefore achieve its daily leveraged investment objective. The Fund's exposure to DRAM is impacted by DRAM's movement. Because of this, it is unlikely that the Fund will be perfectly exposed to DRAM at the end of each day. The possibility of the Fund being materially over- or under-exposed to DRAM increases on days when DRAM is volatile near

the close of the trading day. Market disruptions, regulatory restrictions and high volatility will also adversely affect the Fund's ability to adjust exposure to the required levels.

The Fund may have difficulty achieving its daily leveraged investment objective for many reasons, including fees, expenses, transaction costs, financing costs related to the use of derivatives, accounting standards and their application to income items, disruptions, illiquid or high volatility in the markets for the securities or financial instruments in which the Fund invests, early and unanticipated closings of the markets on which the holdings of the Fund trade, resulting in the inability of the Fund to execute intended portfolio transactions, regulatory and tax considerations, which may cause the Fund to hold (or not to hold) DRAM. The Fund may take or refrain from taking positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's desired correlation with DRAM. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to DRAM. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of DRAM. Any of these factors could decrease the correlation between the performance of the Fund and DRAM and may hinder the Fund's ability to meet its daily leveraged investment objective on or around that day.

Market Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities markets. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, changes in the actual or perceived creditworthiness of issuers, general market liquidity, exchange trading suspensions and closures, and public health risks. The Fund is subject to the risk that geopolitical events will disrupt markets and adversely affect global economies, markets, and exchanges. Local, regional, or global events such as war, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, conflicts and social unrest or other events could have a significant impact on the Fund, its investments, and the Fund's ability to achieve its investment objective.

Indirect Investment Risk. Roundhill Memory ETF is not affiliated with the Trust, the Adviser, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of the Fund. The Trust, the Fund and any affiliate are not responsible for the performance of Roundhill Memory ETF and make no representation as to the performance of DRAM. Investing in the Fund is not equivalent to investing in DRAM. Fund shareholders will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to DRAM.

Underlying Security Investing Risk. Issuer-specific attributes may cause an investment held by the Fund to be more volatile than the market generally. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way a Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

DRAM Investing Risk. Characteristics of DRAM may cause the Fund's investment exposure to be more volatile than the market generally. The value of DRAM may perform differently from the market as a whole. In addition to the risks associated generally with investments in equity securities, DRAM faces risks associated with the semiconductor and memory industry, including cyclical demand, significant fluctuations in memory pricing, periods of industry overcapacity or supply shortages, high capital expenditure requirements, manufacturing and production disruptions, supply chain constraints, customer concentration, evolving technological standards, intense competition, geopolitical and trade-related restrictions, and rapid technological change. These factors may adversely affect the performance of DRAM and, in turn, the Fund.

Other Investment Companies Risk. The Fund obtains exposure to its investment strategy indirectly through its investment in DRAM, which is an ETF. As a result, the value of an investment in the Fund is based in part on the performance of DRAM and its underlying investments. DRAM may change its investment goals, policies or practices and there can be no assurance that DRAM will achieve its investment goals. Because the Fund obtains exposure through DRAM, shareholders indirectly bear a proportionate share of the expenses charged by DRAM and, where applicable, any underlying funds in which DRAM invests, which may adversely affect the Fund's performance. Accordingly, the principal risks of an investment in the Fund included the risks associated with DRAM and the underlying investments to which DRAM provides exposure.

The Fund is exposed indirectly to the risks of the investments held by DRAM, and the Fund's performance will depend in part on the performance of those investments and the management of DRAM. The Fund's ability to achieve its investment objective depends, in part, upon the performance of DRAM.

Concentration Risk. The Fund's assets will be indirectly exposed through its investment in DRAM to a particular sector or sectors or industry or group of industries, which will subject the Fund to the risk that economic, political or other conditions that have a negative effect on those sectors and/or industries may negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries. As of the date of this prospectus, DRAM is concentrated in the industry or group of industries comprising the information technology sector.

Information Technology Industry Risk. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies. Information technology companies are facing increased government and regulatory scrutiny and may be subject to adverse government or regulatory action.

Memory Companies Risk. DRAM invests in Memory Companies, which may have limited product lines, markets, financial resources or personnel and are subject to the risks of changes in business cycles, world economic growth, technological progress and government regulation. These companies are also heavily dependent on intellectual property rights, and challenges to or misappropriation of such rights could have a material adverse effect on such companies. Securities of Memory Companies tend to be more volatile than securities of companies that rely less heavily on technology. Memory Companies typically engage in significant amounts of spending on research and development, and rapid changes to the field could have a material adverse effect on a company's operating results. Additionally, the development, manufacturing, and commercialization of semiconductor memory technologies, including HBM, DRAM and NAND, as well as related subsystems, equipment, materials, and services, are complex and evolving, and may face unforeseen technical challenges (including yield and integration issues), supply chain disruptions, intense competition and pricing volatility, regulatory developments (including export controls), and market acceptance uncertainties. As a result, investments in Memory Companies may be subject to higher levels of risk and volatility.

Semiconductor Companies Risk. DRAM invests in companies primarily involved in the design, distribution, manufacture and sale of semiconductors. Semiconductor companies are significantly affected by rapid obsolescence, intense competition and global demand. DRAM is also subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes. The prices of the securities of semiconductor companies may fluctuate widely in response to such events.

Asia Risk. DRAM invests significantly in the securities of Asian issuers. As such, DRAM is subject to certain risks specifically associated with investments in the securities of Asian issuers. Many Asian economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. Some Asian economies are highly dependent on trade, and economic conditions in other countries within and outside Asia can impact these

economies. Certain of these economies may be adversely affected by trade or policy disputes with its major trade partners. There is also a high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries, as well as a high concentration of investors and financial intermediaries. Certain Asian countries have experienced and may in the future experience expropriation and nationalization of assets, confiscatory taxation, currency manipulation, political instability, armed conflict and social instability as a result of religious, ethnic, socio-economic and/or political unrest. In particular, escalated tensions involving North Korea and any outbreak of hostilities involving North Korea could have a severe adverse effect on Asian economies. Governments of certain Asian countries have exercised, and continue to exercise, substantial influence over many aspects of the private sector. In certain cases, the government owns or controls many companies, including the largest in the country. Accordingly, government actions could have a significant effect on the issuers of DRAM's securities or on economic conditions generally. Recent developments in relations between the U.S. and China have heightened concerns of increased tariffs and restrictions on trade between the two countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on the economy of Asian countries and a commensurately negative impact on DRAM.

South Korea Risk. DRAM invests significantly in the securities of South Korean issuers. DRAM is subject to certain risks specifically associated with investments in the securities of South Korean issuers. Substantial political tensions exist between North Korea and South Korea. Escalated tensions involving the two nations and the outbreak of hostilities between the two nations, or even the threat of an outbreak of hostilities, could have a severe adverse effect on the South Korean economy. In addition, South Korea's economic growth potential has recently been on a decline because of a rapidly aging population and structural problems, among other factors. The South Korean economy is heavily reliant on trading exports, especially to other Asian countries and the U.S., and disruptions or decreases in trade activity could lead to further declines. The South Korean economy's dependence on the economies of Asia and the U.S. means that a reduction in spending by these economies on South Korean products and services or negative changes in any of these economies may cause an adverse impact on the South Korean economy and therefore, on DRAM's investments. In addition, South Korea is located in a part of the world that has historically been prone to natural disasters such as earthquakes, hurricanes or tsunamis, and is economically sensitive to environmental events. Any such event may adversely impact South Korea's economy or business operations of companies in South Korea.

Emerging Markets Risk. DRAM's investments in emerging markets may be subject to a greater risk of loss than investments in more developed markets. Emerging markets may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed markets. Emerging markets often have less uniformity in accounting and reporting requirements, unreliable securities valuation and greater risk associated with custody of securities.

Money Market Instrument Risk. The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Money market funds may be subject to credit risk with respect to the debt instruments in which they invest. Depository accounts may be subject to credit risk with respect to the financial institution in which the depository account is held. Repurchase agreements may be subject to market and credit risk related to the collateral securing the repurchase agreement. Money market instruments may lose money.

Liquidity Risk. Holdings of the Fund may be difficult to buy or sell or may be illiquid, particularly during times of market turmoil. Illiquid securities may be difficult to value, especially in changing or volatile markets. If the Fund is forced to buy or sell an illiquid security or derivative instrument at an unfavorable time or price, the Fund may be adversely impacted. Certain market conditions or restrictions may prevent the Fund from limiting losses, realizing gains, or achieving a high correlation with DRAM. There is no assurance that a security or derivative instrument that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for the Fund. To the extent that DRAM value increases or decreases significantly, the Fund may be one of many market participants that are attempting to transact in the DRAM. Under such circumstances, the market for DRAM may lack sufficient liquidity for all market participants' trades. Therefore, the Fund may have more difficulty transacting in the securities or financial instruments and the Fund's

transactions could exacerbate the price changes of DRAM and may impact the ability of the Fund to achieve its investment objective.

In certain cases, the market for DRAM and/or Fund may lack sufficient liquidity for all market participants' trades. Therefore, the Fund may have difficulty transacting in it and/or in correlated investments, such as swap contracts. Further, the Fund's transactions could exacerbate illiquidity and volatility in the price of DRAM and correlated derivative instruments.

Early Close/Trading Halt Risk. Although an underlying security's shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times. An exchange or market may close or issue trading halts on specific securities or financial instruments, including the shares of the Fund. Under such circumstances, the ability to buy or sell certain portfolio securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell investments for its portfolio, may disrupt the Fund's creation/redemption process, and may temporarily prevent investors from buying and selling shares of the Fund. In addition, the Fund may be unable to accurately price its investments, may fail to achieve performance that is correlated with DRAM and may incur substantial losses. If there is a significant intra-day market event and/or DRAM experiences a significant price increase or decrease, the Fund may not meet its investment objective or rebalance its portfolio appropriately. Additionally, the Fund may close to purchases and sales of Shares prior to the close of regular trading on the exchange and incur significant losses.

Equity Securities Risk. Publicly issued equity securities, including shares, are subject to market risks that may cause their prices to fluctuate over time. Fluctuations in the value of equity securities in which the Fund invests, and/or has exposure to, will cause the net asset value of the Fund to fluctuate. The Fund's direct investments in shares of DRAM does not provide leveraged exposure to DRAM and, as a result, if the Fund invests directly in shares of DRAM to a greater extent, the Fund may not achieve its 200% daily investment objective.

Cash Transaction Risk. The Fund intends to effect creations and redemptions for cash rather than for in-kind securities. As a result, the Fund may not be tax efficient and may incur brokerage costs related to buying and selling securities to achieve its investment objective thus incurring additional expenses than if it had effected creations and redemptions in kind. To the extent that such costs are not offset by transaction fees paid by an authorized participant, the Fund may bear such costs, which will decrease the Fund's net asset value.

Tax Risk. In order to qualify for the special tax treatment accorded a regulated investment company ("RIC") and its shareholders, the Fund must derive at least 90% of its gross income for each taxable year from "qualifying income," meet certain asset diversification tests at the end of each taxable quarter, and meet annual distribution requirements. The Fund's pursuit of its investment strategy will potentially be limited by the Fund's intention to qualify for such treatment and could adversely affect the Fund's ability to so qualify. The Fund may make certain investments, the treatment of which for these purposes is unclear. If, in any year, the Fund were to fail to qualify for the special tax treatment accorded a RIC and its shareholders, and were ineligible to or were not to cure such failure, the Fund would be taxed in the same manner as an ordinary corporation subject to U.S. federal income tax on all its income at the fund level. The resulting taxes could substantially reduce the Fund's net assets and the amount of income available for distribution. In addition, in order to requalify for taxation as a RIC, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make certain distributions. Please see the section entitled "Taxes" in the Statement of Additional Information for more information.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the Investment Company Act of 1940, as amended. This means it has the ability to invest a relatively high percentage of its assets in the securities of a small number of issuers or in financial instruments with a single counterparty or a few counterparties. This may increase the Fund's volatility and increase the risk that the Fund's performance will decline based on the performance of a single issuer or the credit of a single counterparty and make the Fund more susceptible to risks associated with a single economic, political, or regulatory occurrence than a diversified fund.

ETF Risks. The Fund is an exchange-traded fund, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participants, Market Makers, and Liquidity Providers Limitation Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Cash Redemption Risk.* The Fund intends to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.
- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility and volatility in the Fund's portfolio holdings, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. If an investor purchases Shares at a time when the market price is at a premium to the NAV of the Shares or sells at a time when the market price is at a discount to the NAV of the Shares, then the investor may sustain losses that are in addition to any losses caused by a decrease in NAV.
- *Trading.* Although Shares are listed for trading on a national securities exchange, and may be traded on other U.S. exchanges, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Fund Shares.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds. Like other new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

Performance History

The Fund has not yet commenced operations and does not have a full calendar year of performance history. In the future, performance information will be presented in this section of the Prospectus. Performance information will contain a bar chart and table that provide some indication of the risks of investing in the Fund by showing changes in the

Fund's performance from year to year and by showing the Fund's average annual returns for certain time periods as compared to a broad measure of market performance. Investors should be aware that past performance before and after taxes is not necessarily an indication of how the Fund will perform in the future.

Updated performance information for the Fund, including its current net asset value per share, is available by calling toll-free at (833) 759-6110.

Investment Adviser

Tuttle Capital Management, LLC (the "Adviser") is the investment adviser to the Fund.

Portfolio Manager

Matthew Tuttle, Chief Executive Officer of the Adviser, has served as the Fund's portfolio manager since its inception.

Purchase and Sale of Fund Shares

The Fund will issue (or redeem) shares to certain institutional investors (typically market makers or other broker-dealers) only in large blocks of at least 10,000 shares known as "Creation Units." Creation Unit transactions are typically effected in cash, but the Fund reserves the right to accept in-kind securities. Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The Fund's shares are listed on the Exchange (*i.e.*, Cboe BZX Exchange, Inc.). The price of the Fund's shares is based on market price, and because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). When buying or selling shares through a broker, most investors will incur customary brokerage commissions and charges and you may pay some or all of the spread between the bid and the offered prices in the secondary market for shares. Except when aggregated in Creation Units, the Fund's shares are not redeemable securities. Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid/ask spreads, is available on the Fund's website at www.rexshares.com.

Tax Information

The Fund's distributions will be taxed as ordinary income or capital gain, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account in which case withdrawals from such arrangements generally will be taxed.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (*e.g.*, a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other financial intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND'S INVESTMENTS

Roundhill T-REX 2X Long DRAM Daily Target ETF (the "Fund" or the "2X Long ETF")

The Fund's investment objective is described in the summary section for the Fund. The summary section also describes the Fund's principal investment strategies, including the types of securities in which the Fund invests, and the principal risks of investing in the Fund. The principal investment strategies are not the only investment strategies available to the Fund, but they are the ones the Fund primarily uses to achieve its investment objective.

The Fund does not seek to achieve its stated investment objective for a period of time different than a trading day. The Fund's investment objectives and investment policy to invest at least 80% of its net assets in the investments suggested by its name may be changed by the Board of Trustees (the "Board") of ETF Opportunities Trust (the "Trust") without shareholder approval upon sixty (60) days' written notice to shareholders. Unless otherwise noted, all other policies of the Fund may be changed without shareholder approval. The Fund reserves the right to substitute a different ETF, index, or security for the underlying security.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Such investors are expected to monitor and manage their portfolios frequently. Investors in the Fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking daily leveraged investment results; and (c) intend to actively monitor and manage their investments. Investors who do not understand the Fund or do not intend to actively manage their funds and monitor their investments should not buy the Fund.

There is no assurance that the Fund will achieve its investment objective and an investment in the Fund could lose money. No single Fund is a complete investment program.

ETFs are funds that trade like other publicly traded securities. Unlike shares of a mutual fund, which can be bought and redeemed from the issuing fund by all shareholders at a price based on NAV, shares of the Fund may be purchased or redeemed directly from the Fund at NAV solely by Authorized Participants and only in aggregations of a specified number of shares Creation Units. Also, unlike shares of a mutual fund, shares of the Fund are listed on a national securities exchange and trade in the secondary market at market prices that change throughout the day.

The Fund will enter into swap agreements with respect to its underlying security with financial institutions for a specified period ranging from one day to more than one year whereby the Fund and the financial institution will agree to exchange the return earned or realized on the underlying security. The gross returns to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing the underlying security.

Each trading day the Adviser adjusts the 2X Long ETF's exposure to its underlying security such that the notional exposure of all swaps equals 200% of the ETF's aggregate net asset value. The impact of market movements during the day determines whether the total notional swap exposure needs to be increased or decreased. If the price of the underlying security has risen on a given day, the value of the Fund's net assets should rise, meaning its total notional swap exposure will typically need to be increased. Conversely, if the price of the underlying security has fallen on a given day, the value of the Fund's net assets should fall, meaning its total notional swap exposure will typically need to be reduced.

The time and manner in which the Fund rebalances its portfolio may vary from day to day at the sole discretion of the Adviser depending upon market conditions and other circumstances. Generally, at or near the close of the market at each trading day, the Fund will position its portfolio to ensure that the Fund's exposure to its underlying security is consistent with its stated investment objective. The Fund reviews its notional exposure under each of its swap agreements, which reflects the extent of the Fund's total investment exposure under the swap, to ensure that the Fund's exposure is in-line with its stated investment objective. The gross returns to be exchanged are calculated with respect to the notional amount and the underlying security's returns to which the swap is linked. Swaps are typically closed out on a net basis. Thus, while the notional amount reflects the Fund's total investment exposure under the

swap, the net amount is the Fund's current obligations (or rights) under the swap. That is the amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. As a result, the Fund may be more or less exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective. To the extent that the Fund needs to "roll" its swap positions (i.e., enter into new swap positions with a later expiration date as the current positions approach expiration), it could be subjected to increased costs, which could negatively impact the Fund's performance.

To create the necessary exposure, the Fund will enter into one or more swap agreements, which incur borrowing costs. In light of these charges and the Fund's operating expenses, the expected return of the 2X Long ETF over one trading day is equal to the gross expected return, which is the daily underlying stock return, minus (i) financing charges incurred by the Fund in addition to the financing cost embedded in the underlying stock and (ii) daily operating expenses. For instance, if an underlying stock returns 2% on a given day, the gross expected return of the Fund would be 2% multiplied by the daily leverage factor, but the net expected return, which factors in the cost of financing the portfolio and the impact of operating expenses, would be lower.

Additionally, the Fund may invest between 40-80% of the Fund's portfolio depending on the amount of collateral required by the Fund's counterparties in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality.

THE FUND, ETF OPPORTUNITIES TRUST, AND TUTTLE CAPITAL MANAGEMENT, LLC ARE NOT AFFILIATED WITH ROUNDHILL MEMORY ETF, OR REX SHARES, LLC.

Swap Agreements

The Fund will enter into swap agreements to pursue its investment objective of delivering daily investment results, before fees and expenses, of 200% of the daily performance of its underlying security. The swap agreements may include as a reference asset investment vehicle that seek exposure to the underlying security.

Swap agreements are contracts entered into with financial institutions for a specified period ranging from a day to more than one year. In a standard "swap" transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing the underlying security. The Fund may use a combination of swaps on the underlying security and swaps on various investment vehicles that are designed to track the performance of the underlying security. The underlying investment vehicle may not track the performance of the underlying security due to embedded costs and other factors, which may increase the Fund's correlation risk and impact the Fund's ability to correlate with the underlying security.

With respect to the use of swap agreements, if the underlying security has a dramatic move in price that causes a material decline in the Fund's NAV over certain stated periods agreed to by the Fund and the counterparty, the terms of a swap agreement between the Fund and its counterparty may permit the counterparty to immediately close out all swap transactions with the Fund. In that event, a Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve the desired exposure consistent with its investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if the underlying security reverses all or a portion of its price movement. Any costs associated with using swap agreements may also have the effect of lowering the Fund's return.

The Fund may also invest in U.S. Government Securities, money market funds and corporate debt securities such as commercial paper or other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality. The Fund may also invest in short-term bond ETFs.

U.S. government securities include U.S. Treasury obligations and securities issued or guaranteed by various agencies of the U.S. government, or by various instrumentalities that have been established or sponsored by the U.S. government. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government. Securities issued or guaranteed by federal agencies and U.S. government sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. government.

Non-Principal Investments

Cash Equivalents and Short-Term Investments

The Fund may invest in securities with maturities of less than one year or cash equivalents, or they may hold cash. The percentage of the Fund invested in such holdings varies and depends on several factors, including market conditions. For more information on eligible short-term investments, see the SAI.

Synthetic Exposure

The Fund may seek to replicate the long or short exposure to the underlying security by creating a synthetic long or short position. To establish a synthetic long position, the Fund purchases a call option on the underlying security and sells a put option on the underlying security at the same strike price and expiration date. This effectively results in similar risk exposures as would be the case if the Fund held (or entered into a short position on) the underlying security. The Fund may also vary the combination of puts and calls, strike prices, and expiration dates to target 200% investment exposure.

Additional Information Regarding Investment Techniques and Policies

The Effects of Fees and Expenses on the Return of a Fund for a Single Trading Day. To create the necessary exposure, the Fund uses leveraged investment techniques, which necessarily incur brokerage and financing charges. In light of these charges and the Fund’s operating expenses, the expected return of the Fund over one trading day is equal to the gross expected return, which is the daily return of the underlying security multiplied by the Fund’s daily leveraged investment objective, minus (i) financing charges incurred by the portfolio and (ii) daily operating expenses. For instance, if the underlying security returned 2% on a given day, the gross expected return of the Fund would be 4%, but the net expected return, which factors in the cost of financing the portfolio and the impact of operating expenses, would be lower. The Fund will reposition its portfolio at the end of every trading day. Therefore, if an investor purchases a 2X Long ETF shares at close of the markets on a given trading day, the investor’s exposure to the underlying security would reflect 200% of the performance of the underlying security during the following trading day, subject to the charges and expenses noted above.

A Cautionary Note to Investors Regarding Dramatic Price Movement in the Underlying Security. The Fund could lose an amount greater than its net assets in the event of a movement of the underlying security in excess of 50% in a direction adverse to the Fund (meaning a decline in excess of 50% of the value of the underlying security for the 2X Long ETF). The risk of total loss exists.

If the underlying security has a dramatic adverse move that causes a material decline in the Fund’s net assets, the terms of a Fund’s swap agreements may permit the counterparty to immediately close out all swap transactions with the Fund. In that event, a Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve exposure consistent with a Fund’s investment objective. This may prevent a Fund from achieving its leveraged investment objective, even if the underlying security later reverses all or a portion the move, and result in significant losses.

Examples of the Impact of Daily Leverage and Compounding. Because the Fund’s exposure to the underlying security is repositioned on a daily basis, for a holding period longer than one day, the pursuit of a daily investment objective will result in daily leveraged compounding for the Fund. This means that the return of the underlying security over a period of time greater than one day multiplied by a Fund’s daily leveraged investment objective (e.g., 200%) generally will not equal the Fund’s performance over that same period. As a consequence, investors should not plan to hold a Fund unmonitored for periods longer than a single trading day. This deviation increases with higher volatility in the underlying

security and longer holding periods. Further, the return for investors that invest for periods less than a full trading day or for a period different than a trading day will not be the product of the return of a Fund's stated daily leveraged investment objective and the performance of the underlying security for the full trading day. The actual exposure will largely be a function of the performance of the underlying security from the end of the prior trading day.

Consider the following examples:

While these examples are designed to show the effect on the Fund of leverage, volatility, and performance with respect to the underlying security, these examples apply to the underlying security.

Mary is considering investments in two Funds, Funds A and B. Fund A is an ETF which seeks (before fees and expenses) to match the performance of the underlying security. Fund B is a leveraged ETF and seeks daily leveraged investment results (before fees and expenses) that correspond to 200% of the daily performance of the underlying security.

An investment in Fund A would be expected to gain 5% on Day 1 and lose 4.76% on Day 2, returning the investment to its original value. The following example assumes a \$100 investment in Fund A when the underlying security is also valued at \$100:

Day	The Underlying Security Value	The Underlying Security Performance	Value of Fund A Investment
	\$100.00		\$100.00
1	\$105.00	5.00%	\$105.00
2	\$100.00	-4.76%	\$100.00

The same \$100 investment in Fund B would be expected to gain 10% on Day 1 (200% of 5%) but decline 9.52% on Day 2.

Day	The Underlying Security Performance	200% of the Underlying Security Performance	Value of Fund B Investment
			\$100.00
1	5.00%	10.0%	\$110.00
2	-4.76%	-9.52%	\$99.52

Although the percentage decline in Fund B is smaller on Day 2 than the percentage gain on Day 1, the loss is applied to a higher principal amount, so the investment in Fund B experiences a loss even when the aggregate value of the underlying security for the two-day period has not declined. (These calculations do not include the charges for fund fees and expenses).

As you can see, an investment in Fund B has additional risks due to the effects of leverage and compounding.

An investor who purchases shares of the Fund intra-day will generally receive more, or less, than 200% exposure to the underlying security from that point until the end of the trading day. The actual exposure will be largely a function of the performance of the underlying security from the end of the prior trading day. If the Fund's shares are held for a period longer than a single trading day, the Fund's performance is likely to deviate from 200% of the return of the underlying security's performance for the longer period. This deviation will increase with higher volatility of the underlying security and longer holding periods.

Examples of the Impact of Volatility. The Fund rebalances its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses. Daily rebalancing will typically cause the Fund to lose money if the underlying security experience volatility. A volatility rate is a statistical measure of the magnitude of fluctuations in the underlying security's returns over a defined period. For periods longer than a trading day, volatility in

the performance of the underlying security from day to day is the primary cause of any disparity between the Fund's actual returns and the returns of the underlying security for such period. Volatility causes such disparity because it exacerbates the effects of compounding on the Fund's returns. In addition, the effects of volatility are magnified in the Fund due to leverage. Consider the following three examples that demonstrate the effect of volatility on a hypothetical fund:

Example 1 – The Underlying Security Experiences Low Volatility

Mary invests \$10.00 in a 2X Long ETF at the close of trading on Day 1. During Day 2, the underlying security rises from 100 to 102, a 2% gain. Mary's investment rises 4% to \$10.40. Mary holds her investment through the close of trading on Day 3, during which the underlying security rises from 102 to 104, a gain of 1.96%. Mary's investment rises to \$10.81, a gain during Day 3 of 3.92%. For the two-day period since Mary invested in the Fund, the underlying security gained 4% although Mary's investment increased by 8.1%. Because the underlying security continued to trend upwards with low volatility, Mary's return closely correlates to the 200% return of the return of the underlying security for the period.

Example 2 – The Underlying Security Experiences High Volatility

Mary invests \$10.00 in a 2X Long ETF after the close of trading on Day 1. During Day 2, the underlying security rises from 100 to 102, a 2% gain, and Mary's investment rises 4% to \$10.40. Mary continues to hold her investment through the end of Day 3, during which the underlying security declines from 102 to 98, a loss of 3.92%. Mary's investment declines by 7.84%, from \$10.40 to \$9.58. For the two-day period since Mary invested in the Fund, the underlying security lost 2% while Mary's investment decreased from \$10 to \$9.58, a 4.2% loss. The volatility of the underlying security affected the correlation between the underlying security's return for the two-day period and Mary's return. In this situation, Mary lost more than two times the return of the underlying security.

Example 3 – Intra-day Investment with Volatility

The examples above assumed that Mary purchased the Fund at the close of trading on Day 1 and sold her investment at the close of trading on a subsequent day. However, if she made an investment intra-day, she would have received a beta determined by the performance of the underlying security from the end of the prior trading day until her time of purchase on the next trading day. Consider the following example.

Mary invests \$10.00 in a 2X Long ETF at 11 a.m. on Day 2. From the close of trading on Day 1 until 11 a.m. on Day 2, the underlying security moved from 100 to 102, a 2% gain. In light of that gain, the Fund beta at the point at which Mary invests is 196%. During the remainder of Day 2, the underlying security rises from 102 to 110, a gain of 7.84%, and Mary's investment rises 15.4% (which is the underlying security's gain of 7.84% multiplied by the 196% beta that she received) to \$11.54. Mary continues to hold her investment through the close of trading on Day 3, during which the underlying security declines from 110 to 90, a loss of 18.18%. Mary's investment declines by 36.4%, from \$11.54 to \$7.34. For the period of Mary's investment, the underlying security declined from 102 to 90, a loss of 11.76%, while Mary's investment decreased from \$10.00 to \$7.34, a 27% loss. The volatility of the underlying security affected the correlation between the underlying security's return for period and Mary's return. In this situation, Mary lost more than two times the return of the underlying security. Mary was also hurt because she missed the first 2% move of the underlying security and had a beta of 196% for the remainder of Day 2.

Market Volatility. The Fund seeks to provide a return which is a multiple of the daily performance of the underlying security. Neither Fund attempts to, and should not be expected to, provide returns which are a multiple of the return of the underlying security for periods other than a single day. The Fund rebalances its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses.

Daily rebalancing will impair a Fund's performance if the underlying security experiences volatility. For instance, a 2X Long ETF would be expected to lose 4% (as shown in Table 1 below) if the underlying security provide no return over a one-year period and experienced annualized volatility of 20%. If the underlying security's annualized volatility were to rise to 40%, the hypothetical loss for a one-year period for a 2X Long ETF widens to approximately 15%.

Table 1

Volatility Range	2X Long ETF Losses
0.1	-0.01
0.2	-0.04
0.3	-0.09
0.4	-0.15
0.5	-0.23
0.6	-0.33
0.7	-0.47
0.8	-0.55
0.9	-0.76
1	-0.84

Note that at higher volatility levels, there is a chance of a complete loss of Fund assets even if the underlying security is flat. For instance, if annualized volatility of the underlying security was 90%, a 2X Long ETF based on the underlying security would be expected to lose 76%, even if the underlying security returned 0% for the year.

Table 2 will show the annualized historical volatility rate for the underlying security once the information becomes available. Since market volatility has negative implications for funds which rebalance daily, investors should be sure to monitor and manage their investments in the Fund particularly in volatile markets. The negative implications of volatility in Table 1 can be combined with the recent volatility in Table 2 to give investors some sense of the risks of holding a Fund for longer periods over the past five years. Historical volatility and performance are not likely indicative of future volatility and performance.

Table 2 – Historic Volatility of the Underlying Security

The Underlying Security	5-Year Historical Volatility Rate
DRAM	N/A*

* The underlying security began trading in calendar year 2026 and as of the date of this prospectus, does not have a track record of historical daily volatility.

The Projected Returns of the Fund for Intra-Day Purchases. Because the Fund rebalances its portfolio once daily, an investor who purchases shares during a day will likely have more, or less, than 200% leveraged investment exposure to the underlying security. The exposure to the underlying security received by an investor who purchases a Fund intra-day will differ from the Fund's stated daily leveraged investment objective (e.g., 200%) by an amount determined by the movement of the underlying security from their value at the end of the prior day. If the underlying security moves in a direction favorable to the Fund between the close of the market on one trading day through the time on the next trading day when the investor purchases the Fund shares, the investor will receive less exposure to the underlying security than the stated fund daily leveraged investment objective (e.g., 200%). Conversely, if the underlying security moves in a direction adverse to the Fund, the investor will receive more exposure to the underlying security than the stated fund daily leveraged investment objective (e.g., 200%).

Table 2 below indicates the exposure to the underlying security that an intra-day purchase of the 2X Long ETF would be expected to provide based upon the movement in the value of the underlying security from the close of the market on the prior trading day. Such exposure holds until a subsequent sale on that same trading day or until the close of the market on that trading day. For instance, if the underlying security has moved 5% in a direction favorable to the Fund, the investor would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 191% of the investor's investment.

Conversely, if the underlying security has moved 5% in a direction unfavorable to the Fund, an investor at that point would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 211% of the investor's investment.

The table includes a range of the underlying security moves from 20% to -20% for the Fund. Movement of the underlying security beyond the range noted below will result in exposure further from the Fund's daily leveraged investment objective.

Table 3 – Intra-Day Leverage of the 2X Long ETF

The Underlying Security	Resulting Exposure for the 2X Long ETF
-20%	267%
-15%	243%
-10%	225%
-5%	211%
0%	200%
5%	191%
10%	183%
15%	177%
20%	171%

The Projected Returns of the Fund for Periods Other Than a Single Trading Day. The Fund seeks leveraged investment results on a daily basis — from the close of regular trading on one trading day to the close on the next trading day — which should not be equated with seeking a leveraged investment objective for any other period. For instance, if the underlying security gains 10% for a week, the Fund should not be expected to provide a return of 20% for the week even if it meets its daily leveraged investment objective throughout the week. This is true because of the financing charges noted above but also because the pursuit of daily goals may result in daily leveraged compounding, which means that the return of the underlying security over a period of time greater than one day multiplied by the Fund's daily leveraged investment objective (e.g., 200%) will not generally equal a Fund's performance over that same period. In addition, the effects of compounding become greater the longer Shares are held beyond a single trading day.

The following table sets out a range of hypothetical daily performances during a given 10 trading days of a hypothetical underlying security and demonstrate how changes in the hypothetical underlying security impacts the hypothetical Fund's performance for a trading day and cumulatively up to, and including, the entire 10 trading day period. The charts are based on a hypothetical \$100 investment in the hypothetical Fund over a 10-trading day period and do not reflect fees or expenses of any kind.

Table 4 - The Underlying Security Lacks a Clear Trend

The Underlying Security				The 2X Long ETF*		
	Value	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	100			\$100.00		
Day 1	105	5.00%	5.00%	\$110.00	10.00%	10.00%
Day 2	110	4.76%	10.00%	\$120.48	9.52%	20.47%
Day 3	100	-9.09%	0.00%	\$98.57	-18.18%	-1.43%
Day 4	90	-10.00%	-10.00%	\$78.86	-20.00%	-21.14%
Day 5	85	-5.56%	-15.00%	\$70.10	-11.12%	-29.91%
Day 6	100	17.65%	0.00%	\$94.83	35.30%	-5.17%
Day 7	95	-5.00%	-5.00%	\$85.35	-10.00%	-14.65%
Day 8	100	5.26%	0.00%	\$94.34	10.52%	-5.68%
Day 9	105	5.00%	5.00%	\$103.77	10.00%	3.76%
Day 10	100	-4.76%	0.00%	\$93.89	-9.52%	-6.12%

*Figures in this table have been rounded for convenience.

The cumulative performance of the hypothetical underlying security in Table 4 is 0% for 10 trading days. The return of the hypothetical 2X Long ETF for the 10-trading day period is -6.12%. The volatility of the hypothetical underlying security's performance and lack of a clear trend results in performance for the hypothetical Fund for the period which bears little relationship to the performance of the hypothetical underlying security for the 10-trading day period.

Table 5 – The Underlying Security Rises in a Clear Trend

The Underlying Security				The 2X Long ETF*		
	Value	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	100			\$100.00		
Day 1	102	2.00%	2.00%	\$104.00	4.00%	4.00%
Day 2	104	1.96%	4.00%	\$108.08	3.92%	8.08%
Day 3	106	1.92%	6.00%	\$112.24	3.84%	12.23%
Day 4	108	1.89%	8.00%	\$116.47	3.78%	16.47%
Day 5	110	1.85%	10.00%	\$120.78	3.70%	20.78%
Day 6	112	1.82%	12.00%	\$125.18	3.64%	25.17%
Day 7	114	1.79%	14.00%	\$129.65	3.58%	29.66%
Day 8	116	1.75%	16.00%	\$134.20	3.50%	34.19%
Day 9	118	1.72%	18.00%	\$138.82	3.44%	38.81%
Day 10	120	1.69%	20.00%	\$143.53	3.38%	43.50%

*Figures in this table have been rounded for convenience.

The cumulative performance of the hypothetical underlying security in Table 5 is 20% for 10 trading days. The return of the hypothetical 2X Long ETF for the 10-trading day period is 43.50%. In this case, because of the positive hypothetical underlying security trend, the hypothetical 2X Long ETF's gain is greater than 200% of the hypothetical underlying security gain for the 10-trading day period.

Table 6 – The Underlying Security Declines in a Clear Trend

The Underlying Security				The 2X Long ETF*		
	Value	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	100			\$100.00		
Day 1	98	-2.00%	-2.00%	\$96.00	-4.00%	-4.00%
Day 2	96	-2.04%	-4.00%	\$92.08	-4.08%	-7.92%
Day 3	94	-2.08%	-6.00%	\$88.24	-4.16%	-11.75%
Day 4	92	-2.13%	-8.00%	\$84.49	-4.26%	-15.51%
Day 5	90	-2.17%	-10.00%	\$80.82	-4.34%	-19.17%
Day 6	88	-2.22%	-12.00%	\$77.22	-4.44%	-22.76%
Day 7	86	-2.27%	-14.00%	\$73.71	-4.54%	-26.27%
Day 8	84	-2.33%	-16.00%	\$70.29	-4.66%	-29.71%
Day 9	82	-2.38%	-18.00%	\$66.94	-4.76%	-33.05%
Day 10	80	-2.44%	-20.00%	\$63.67	-4.88%	-36.32%

*Figures in this table have been rounded for convenience.

The cumulative performance of the hypothetical underlying security in Table 6 is -20% for 10 trading days. The return of the hypothetical 2X Long ETF for the 10-trading day period is -36.32%. In this case, because of the negative hypothetical underlying security trend, the hypothetical 2X Long ETF's decline is less than 200% of the hypothetical underlying security decline for the 10-trading day period.

ADDITIONAL INFORMATION ABOUT RISK

It is important that you closely review and understand the risks of investing in the Fund. The Fund's NAV and investment return will fluctuate based upon changes in the value of its portfolio securities. You could lose money on your investment in the Fund, and the Fund could underperform other investments. There is no guarantee that the Fund will meet its investment objective. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Below are some of the specific risks of investing in the Fund including the risks of the investment strategies of the underlying security.

Additional Information About Principal Risks. The principal risks of investing in the Fund are summarized in the Fund Summary for the Fund. The discussion below provides additional information about certain of those principal risks and certain risks that are particularly relevant to the Fund's investment strategies. All of the principal risks identified in the Fund Summary apply to an investment in the Fund, even if not discussed below in detail.

Effects of Compounding and Market Volatility Risk

The Fund has a daily leveraged investment objective and the Fund's performance for periods greater than a trading day will be the result of each day's returns compounded over the period, which is very likely to differ from an underlying security's performance times the stated multiple in the Fund's investment objective, before fees and expenses. Compounding affects all investments, but has a more significant impact on leveraged funds and funds that rebalance daily.

Over time, the cumulative percentage increase or decrease in the value of a Fund's portfolio may diverge significantly from the cumulative percentage increase of 200% of the return of the Fund's underlying security due to the compounding effect of losses and gains on the returns of the Fund. It also is expected that a Fund's use of leverage will cause the Fund to underperform the return of 200% of its underlying security in a trendless or flat market.

The chart below provides examples of how volatility could affect a Fund's performance. A security's volatility rate is a statistical measure of the magnitude of fluctuations in the returns of the security. Fund performance for periods greater than one single day can be estimated given any set of assumptions for the following factors: a) volatility; b) performance; c) period of time; d) financing rates associated with leveraged exposure; e) other Fund expenses; and f) dividends or

interest paid with respect to securities in its underlying security. The chart below illustrates the impact of two principal factors – volatility and performance – on Fund performance. The chart shows estimated Fund returns for a number of combinations of volatility and performance over a one-year period. Performance shown in the chart assumes that: (i) no dividends were paid with respect to the securities included in its underlying security; (ii) there were no Fund expenses; and (iii) borrowing/lending rates (to obtain leveraged exposure for the Fund) of 0%. If Fund expenses and/or actual borrowing/lending rates were reflected, the estimated returns would be different than those shown. Particularly during periods of higher volatility, compounding will cause results for periods longer than a trading day to vary from 200% of the performance of the underlying security.

During periods of higher volatility, the volatility of the underlying security may affect the Fund's return as much as, or more than, the return of the underlying security. The effects of compounding will impact each shareholder differently depending on the period of time an investment in the Fund is held and the volatility of the underlying security during a shareholder's holding period of an investment in the Fund.

As shown below, a Fund would be expected to lose 6.1% if its underlying security provided no return over a one-year period during which its underlying security experienced annualized volatility of 25%. If its underlying security's annualized volatility were to rise to 75%, the hypothetical loss for a one-year period for a Fund widens to approximately 43%.

At higher ranges of volatility, there is a chance of a significant loss of value in a Fund. For instance, if an underlying security's annualized volatility is 100%, the Fund would be expected to lose approximately 63.2% of its value, even if the cumulative return of its underlying security for the year was 0%. The volatility of ETFs or instruments that reflect the value of the underlying security, such as swaps, may differ from the volatility of the Fund's underlying security.

One Year Return	200% One Year Return	Volatility Rate				
		10%	25%	50%	75%	100%
-60%	-120%	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	-100%	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	-80%	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	-60%	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	-40%	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	-20%	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	0%	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	20%	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	40%	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	60%	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	80%	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	100%	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	120%	153.5%	140.5%	99.4%	45.9%	-5.8%

Holding an unmanaged position opens the investor to the risk of market volatility adversely affecting the performance of the investment. The Fund is not appropriate for investors who do not intend to actively monitor and manage their portfolios. The table is intended to underscore the fact that the Fund is designed as a short-term trading vehicle for investors who intend to actively monitor and manage their portfolios.

For additional information and examples demonstrating the effects of volatility and performance on the long-term performance of the Fund, see the "Additional Information About Investment Techniques and Policies."

Leverage Risk. To achieve its daily investment objective, the Fund employs leverage and are exposed to the risk that adverse daily performance of the Fund's underlying security will be magnified. This means that, if the Fund's underlying security experiences adverse daily performance (meaning a decline in the value of the underlying security of the Fund for the 2X Long ETF), an investment in the Fund will be reduced by an amount equal to 2% for every 1% of adverse performance, not including the costs of financing leverage and other operating expenses, which would further reduce its value.

The Fund could theoretically lose an amount greater than its net assets if its underlying security moves more than 50% in a direction adverse to the Fund (meaning a decline in the value of the underlying security of the Fund for the 2X Long ETF). This would result in a total loss of a shareholder's investment in one day even if its underlying security subsequently moves in the opposite direction and eliminates all or a portion of its earlier daily change. A total loss may occur in a single day even if its underlying security does not lose all of its value. Leverage will also have the effect of magnifying any differences in the Fund's correlation with the underlying security or may increase the Fund's volatility.

To the extent that the instruments utilized by the Fund are thinly traded or have a limited market, the Fund may be unable to meet its investment objective due to a lack of available investments or counterparties. During such periods, the Fund's ability to issue additional Creation Units may be adversely affected. As a result, the Fund's shares could trade at a premium or discount to their NAV and/or the bid-ask spread of the Fund's shares could widen. Under such circumstances, the Fund may increase its transaction fee, change its investment objective by, for example, seeking to track an alternative underlying security, reduce its leverage or close. In such circumstances, the Fund's investment adviser will consult with counsel to the Trust and its Board of Trustees, and if determined to be necessary, the Fund will amend and/or supplement the prospectus as promptly as feasible under the circumstances to include appropriate disclosures.

Derivatives Risk. The Fund may obtain exposure through derivatives by investing in swap agreements. Investing in derivatives may be considered aggressive and may expose a Fund to risks different from, and possibly greater than, risks associated with investing directly in the reference asset(s) underlying the derivative. The use of derivatives may result in larger losses or smaller gains than investing in the underlying security directly. The use of derivatives may expose the Fund to additional risks such as counterparty risk, liquidity risk and increased daily correlation risk. When the Fund uses derivatives, there may be imperfect correlation between the value of the underlying reference assets and the derivative, which may prevent a Fund from achieving its investment objective.

The Fund expects to use a combination of swaps on the underlying security. The performance of an ETF may not track the performance of its underlying security due to embedded costs and other factors. Thus, to the extent a Fund invests in swaps that use an ETF as the reference asset, the Fund may be subject to greater correlation risk and may not achieve as high a degree of correlation with its underlying security as it would if the Fund only used swaps on the underlying security. If the underlying security has a dramatic move in price that causes a material decline in the Fund's NAV over certain stated periods agreed to by the Fund and the counterparty, the terms of the swap agreement between the Fund and its counterparty may allow the counterparty to immediately close out of all swap transactions with the Fund. In such circumstances, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve the desired exposure consistent with the Fund's daily leveraged investment objective. This may prevent a Fund from achieving its daily leveraged investment objective even if the underlying security reverses all or a portion of its price movement. The value of an investment in the Fund may change quickly and without warning. Any financing, borrowing or other costs associated with using derivatives may also have the effect of lowering the Fund's return. Such costs may increase as interest rates rise.

Swaps Risk. Swap agreements are entered into with financial institutions for a specified period which may range from one day to more than one year. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a reference asset. Swap agreements are generally traded over-the-counter, and therefore, may not receive as much regulatory protection, which may expose investors to significant losses.

Counterparty Risk. Counterparty risk is the risk that a counterparty is unwilling or unable to make timely payments to meet its contractual obligations with respect to the amount a Fund expects to receive from a counterparty to a financial instrument entered into by the Fund. The Fund generally enters into derivatives transactions, such as the swap agreements, with counterparties such that either party can terminate the contract without penalty prior to the termination date. If a counterparty terminates a contract, a Fund may not be able to invest in other derivatives to achieve the desired exposure, or achieving such exposure may be more expensive. The Fund may be negatively impacted if a counterparty becomes bankrupt or otherwise fails to perform its obligations under such a contract, or if any collateral posted by the counterparty for the benefit of a Fund is insufficient or there are delays in the Fund's ability to access such collateral. If the counterparty becomes bankrupt or defaults on its payment obligations to the Fund, it may experience significant delays in obtaining any recovery, may obtain only a limited recovery or obtain no recovery and the value of an investment held by the Fund may decline. The Fund may also not be able to exercise remedies, such as the termination of transactions, netting of obligations and realization on collateral, if such remedies are stayed or eliminated under special resolutions adopted in the United States, the European Union, and various other jurisdictions. European Union rules and regulations intervene when a financial institution is experiencing financial difficulties and could reduce, eliminate, or convert to equity a counterparty's obligations to the Fund (sometimes referred to as a "bail in").

The Fund typically enters into transactions with counterparties that present minimal risks based on the Adviser's assessment of the counterparty's creditworthiness, or its capacity to meet its financial obligations during the term of the derivative agreement or contract. The Adviser considers factors such as counterparty credit rating among other factors when determining whether a counterparty is creditworthy. The Adviser regularly monitors the creditworthiness of each counterparty with which a Fund transacts. The Fund generally enters into swap agreements or other financial instruments with financial institutions and seeks to mitigate risks by generally requiring that the counterparties for the Fund to post collateral, marked to market daily, in an amount approximately equal to what the counterparty owes a Fund, subject to certain minimum thresholds. To the extent any such collateral is insufficient or there are delays in accessing the collateral, the Fund will be exposed to the risks described above. If a counterparty's credit ratings decline, the Fund may be subject to a bail-in, as described above.

In addition, the Fund may enter into swap agreements with a limited number of counterparties, which may increase a Fund's exposure to counterparty credit risk. A Fund does not specifically limit its counterparty risk with respect to any single counterparty. There is a risk that no suitable counterparties are willing to enter into, or continue to enter into, transactions with the Fund and, as a result, a Fund may not be able to achieve its investment objective or may decide to change its leveraged investment objective. The risk of a limited number of counterparties may be, and historically has been, particularly accentuated during times of significant market volatility. During times of significant market volatility, the costs to enter into the swaps that the Fund utilizes may increase significantly, which may negatively impact the Fund's returns. While the objective of the Fund is to seek daily investment results, *before fees and expenses*, of 200% of the daily performance of the underlying security, it is important for investors to understand that significant increases in the costs of entering into the swaps may negatively impact investment results *after fees and expenses*. Additionally, although a counterparty to a centrally cleared swap agreement is often backed by a futures commission merchant ("FCM") or a clearing organization that is further backed by a group of financial institutions, there may be instances in which a FCM or a clearing organization would fail to perform its obligations, causing significant losses to the Fund.

Intra-Day Investment Risk. The Fund seeks daily leveraged investment results, which should not be equated with seeking an investment objective for shorter than a day. Thus, an investor who purchases Fund shares after the close of the markets on one trading day and before the close of the markets on the next trading day will likely have more, or less, than 200% leveraged investment exposure to the underlying security, depending upon the movement of the underlying security from the end of one trading day until the time of purchase. If the underlying security moves in a direction favorable to a Fund, the investor will receive less than 200% exposure to the underlying security. Conversely, if the underlying security moves in a direction adverse to a Fund, the investor will receive exposure to the underlying security greater than 200%. Thus, an investor that purchases shares intra-day may experience performance that is greater than, or less than, the Fund's stated multiple of its underlying security.

Options Contracts. The use of options contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, including the anticipated volatility,

which are affected by fiscal and monetary policies and by national and international politics, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. The values of the options contracts in which the Fund invests are substantially influenced by the value of the underlying instrument. The Fund may experience substantial downside from specific option positions and certain option positions held by the Fund may expire worthless. The options held by the Fund are exercisable at the strike price on their expiration date. As an option approaches its expiration date, its value typically increasingly moves with the value of the underlying instrument. However, prior to expiry, the value of an option generally does not increase or decrease at the same rate as the underlying instrument. There may at times be an imperfect correlation between the movement in values options contracts and the reference asset, and there may at times not be a liquid secondary market for certain options contracts. The value of the options held by the Fund will be determined based on market quotations or other recognized pricing methods. As the options contracts are exercised or expire the Fund may enter into new options contracts, a practice referred to as rolling.

FLEX Options Risk. The FLEX Options held by the Fund will be exercisable at the strike price only on their expiration date. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or using other recognized pricing methods. The value of the FLEX Options prior to the expiration date may vary because of related factors other than the value of the reference asset. Factors that may influence the value of the FLEX Options, other than gains or losses in the reference asset, may include interest rate changes, changing supply and demand, decreased liquidity of the FLEX Options, and changing volatility levels of the reference asset.

FLEX Options are listed on an exchange; however, it is not guaranteed that a liquid secondary trading market will exist. In the event that trading in the FLEX Options is limited or absent, the value of the FLEX Options may decrease.

Daily Correlation Risk. There is no guarantee that the Fund will achieve a high degree of correlation to an underlying security and therefore achieve its respective daily leveraged investment objective. The Fund's exposure to an underlying security is impacted by an underlying security's movement. Because of this, it is unlikely that the Fund will be perfectly exposed to its underlying security at the end of each day. The possibility of the Fund being materially over- or under-exposed to an underlying security increase on days when an underlying security is volatile near the close of the trading day. Market disruptions, regulatory restrictions and high volatility will also adversely affect the Fund's ability to adjust exposure to the required levels.

The Fund may have difficulty achieving its daily leveraged investment objective for many reasons, including fees, expenses, transaction costs, financing costs related to the use of derivatives, investments in ETFs, directly or indirectly, accounting standards and their application to income items, disruptions, illiquid or high volatility in the markets for the securities or financial instruments in which a Fund invests, early and unanticipated closings of the markets on which the holdings of a Fund trade, resulting in the inability of the Fund to execute intended portfolio transactions, regulatory and tax considerations, which may cause the Fund to hold (or not to hold) an underlying security. The Fund may take or refrain from taking positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with an underlying security. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to an underlying security. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of a Fund and changes in the performance of an underlying security. Any of these factors could decrease the correlation between the performance of a Fund and an underlying security and may hinder a Fund's ability to meet its daily investment objective on or around that day.

Cash Transaction Risk. Unlike most ETFs, the Fund effects creation, and redemptions principally for cash, rather than principally for in-kind securities, because of the nature of the financial instruments held by the Fund. As such, investment in the Fund is not expected to be tax efficient and will incur brokerage costs related to buying and selling securities to achieve the Fund's investment objective. To the extent that such costs are not offset by fees payable by an authorized participant, the Fund may bear such costs, which will decrease the Fund's net asset value. ETFs generally are able to make in-kind redemptions and avoid being taxed on gains on the distributed portfolio securities at the fund level. Because the Fund effects redemptions principally for cash, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that

might not have been incurred if the Fund had made a redemption in-kind and this may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process. Additionally, because the Fund is conducting the portfolio transactions rather than receiving securities in-kind the Fund will incur brokerage commissions and other related expenses thus the Fund's expenses will be higher than funds that utilize in-kind creations and redemptions.

Market Risk. The Fund's investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities markets. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, inflation rates and/or investor expectations concerning such rates, changes in interest rates, changes in the actual or perceived creditworthiness of issuers, general market liquidity, exchange trading suspensions and closures, and public health risks. Securities markets also may experience long periods of decline in value. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously and changes in the financial condition of a single issuer can impact a market the markets broadly. The Fund is subject to the risk that geopolitical events will disrupt markets and adversely affect global economies, markets, and exchanges. Local, regional, or global events such as war, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, conflicts and social unrest or other events could have a significant impact on the Fund, its investments and a Fund's ability to achieve its investment objective.

Markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or securities markets more broadly.

Liquidity Risk. Some securities held by a Fund may be difficult to buy or sell or illiquid, particularly during times of market turmoil. Illiquid securities may be difficult to value, especially in changing or volatile markets. If a Fund is forced to buy or sell an illiquid security or derivative instrument at an unfavorable time or price, a Fund may incur a loss. Certain market conditions may prevent a Fund from limiting losses, realizing gains, or achieving a high correlation with its underlying security. There is no assurance that a security or derivative instrument that is deemed liquid when purchased will continue to be liquid. Market illiquidity may cause losses for certain funds. For this Fund, to the extent that a Fund's underlying security moves adversely, a Fund may be one of many market participants that are attempting to facilitate a transaction. Under such circumstances, the market may lack sufficient liquidity for all market participants' trades. Therefore, a Fund may have more difficulty transacting in the security or correlated derivative instruments and a Fund's transactions could exacerbate the price change of the security. Additionally, because a Fund is leveraged, a minor adverse change in the value of underlying security should be expected to have a substantial adverse impact on a Fund and impact its ability to achieve its investment objective.

In certain cases, the market for its underlying security and/or Fund may lack sufficient liquidity for all market participants' trades. Therefore, a Fund may have difficulty transacting in it and/or in correlated investments, such as swap contracts. Further, a Fund's transactions could exacerbate illiquidity and volatility in the price of the securities and correlated derivative instruments.

Early Close/Trading Halt Risk. Although an underlying security's shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times. When securities experience a sharp decline in price, an exchange or market may close entirely or halt for a period of time in accordance with exchange "circuit breaker" rules or issue trading halts on specific securities and therefore, a Fund's ability to buy or sell certain securities or financial instruments may be restricted. These exchange or market actions may result in a Fund being unable to buy or sell certain securities or financial instruments. A Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses. If a Fund is unable to rebalance its portfolio due to a market closure, a trading halt, an emergency, or other market disrupting event, it may result in a Fund not achieving its investment objective and a Fund having a significantly larger leverage multiple than 200%, which may result in significant losses to Fund shareholders in certain circumstances.

Additionally, exchange or market closures or trading halts may result in a Fund's shares trading at an increasingly large discount to NAV and/or at increasingly wide bid-ask spreads during part of, or all of, the trading day.

Special Risks of Exchange-Traded Funds

Authorized Participants Concentration Risk. The Fund may have a limited number of financial institutions that may act as Authorized Participants. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, Shares may trade at larger bid-ask spreads and/or premiums or discounts to NAV. Authorized Participant concentration risk may be heightened for a fund that invests in non-U.S. securities or other securities or instruments that have lower trading volumes.

Absence of Active Market Risk. Although Shares are listed for trading on a stock exchange, there is no assurance that an active trading market for them will develop or be maintained. In the absence of an active trading market for Shares, they will likely trade with a wider bid/ask spread and at a greater premium or discount to NAV.

Market Price Variance Risk. Shares of a Fund can be bought and sold in the secondary market at market prices rather than at NAV. When Shares trade at a price greater than NAV, they are said to trade at a “premium.” When they trade at a price less than NAV, they are said to trade at a “discount.” The market price of Shares fluctuates based on changes in the value of a Fund’s holdings and on the supply and demand for Shares. Because Shares can be created and redeemed in Creation Units at NAV, the Adviser believes that large discounts or premiums to the net asset value of Shares should not be sustained over the long term. Nevertheless, the market price of Shares may vary significantly from NAV during periods of market volatility. Further, to the extent that exchange specialists, market makers and/or Authorized Participants are unavailable or unable to trade a Fund’s Shares and/or create and redeem Creation Units, bid/ask spreads and premiums or discounts may widen. The exact exposure of an investment in a Fund intraday in the secondary market is a function of the difference between the value of the underlying security at the market close on the first trading day and the value of the underlying security at the time of purchase. Thus, an investor that purchases shares intra-day may experience performance that is greater than, or less than, a Fund’s stated multiple of its underlying security.

Trading Cost Risk. Buying or selling Fund shares on an exchange involves two types of costs that apply to all securities transactions. When buying or selling shares of a Fund through a broker, you will likely incur a brokerage commission and other charges. In addition, you may incur the cost of the “spread”; that is, the difference between what investors are willing to pay for Fund shares (the “bid” price) and the price at which they are willing to sell Fund shares (the “ask” price). The spread, which varies over time for shares of a Fund based on trading volume and market liquidity, is generally narrower if the Fund has more trading volume and market liquidity and wider if the Fund has less trading volume and market liquidity. In addition, increased market volatility may cause wider spreads. There may also be regulatory and other charges that are incurred as a result of trading activity. Because of the costs inherent in buying or selling Fund shares, frequent trading may detract significantly from investment results and an investment in Fund shares may not be advisable for investors who anticipate regularly making small investments through a brokerage account.

Exchange Trading Risk. Trading in Shares on an exchange may be halted due to market conditions or for reasons that, in the view of that exchange, make trading in Shares inadvisable, such as extraordinary market volatility or other reasons. Extraordinary market volatility can lead to trading halts pursuant to “circuit breaker” rules of the exchange or market. There can be no assurance that Shares will continue to meet the listing requirements of the exchange on which they trade, and the listing requirements may be amended from time to time.

MANAGEMENT

The Investment Adviser. Tuttle Capital Management, LLC (the “Adviser”), 155 Lockwood Rd., Riverside, Connecticut 06878, is the investment adviser for the Fund. The Adviser is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. The Adviser is a Delaware limited liability company and was organized in 2012.

Under the Investment Advisory Agreement between the Adviser and the Trust, on behalf of the Fund (the “Investment Advisory Agreement”), the Adviser is responsible for the day-to-day management of the Fund’s investments. The Adviser also: (i) furnishes the Fund with office space and certain administrative services; and (ii) provides guidance and policy direction in connection with its daily management of the Fund’s assets, subject to the authority of the Board. For

its services, the Adviser is entitled to receive an annual management fee calculated daily and payable monthly, at the annual rate of 1.50% of the Fund's average daily net assets. The Adviser has contractually agreed to waive its management fee and/or pay for operating expenses of the Fund to ensure that total annual fund operating expenses (exclusive of interest, distribution fees pursuant to Rule 12b-1 Plans, taxes, acquired fund fees and expenses, brokerage commissions, dividend expense on short sales, and other expenditures which are capitalized in accordance with generally accepted accounting principles and other extraordinary expenses not incurred in the ordinary course of business) do not exceed an annual rate of 1.25% of the average daily net assets of the Fund until September 30, 2027 and the Adviser may not terminate this arrangement prior to that date.

Under the Investment Advisory Agreement, the Adviser has agreed, at its own expense and without reimbursement from the Fund, to pay all expenses of the Fund, except for: the fee paid to the Adviser pursuant to the Investment Advisory Agreement, interest expenses, taxes, acquired fund fees and expenses, brokerage commissions and any other portfolio transaction related expenses and fees arising out of transactions effected on behalf of the Fund, credit facility fees and expenses, including interest expenses, and litigation and indemnification expenses and other extraordinary expenses not incurred in the ordinary course of the Fund's business.

A discussion regarding the basis for the Board approving the Investment Advisory Agreement for the Fund will be available in the Fund's semi-annual report filed on Form N-CSR once that report is produced.

Fund Sponsor

REX Shares, LLC ("REX" or the "Sponsor"), a Delaware limited liability company, located in Miami, Florida, is an independent sponsor of ETFs. The research of an affiliate of REX was used in the creation of the Fund's trading strategy. REX does not make investment decisions, provide investment advice, or otherwise act in the capacity of an investment adviser to the Fund. REX is not related to the Adviser, the Fund or any of the underlying stocks of the Fund. REX makes no representation or warranty, express or implied, to the owners of the Shares or any member of the public regarding the advisability of investing in securities generally or in the Shares in particular, or as to the ability of any Fund to meet its investment objective.

The Adviser has entered into an agreement with the Sponsor pursuant to which the Sponsor and the Adviser have jointly assumed the obligation of the Adviser to pay all expenses of the Fund, except excluded expenses. The Sponsor will also provide marketing support for the Fund including, but not limited to, providing the Fund with access to and the use of the Sponsor's marketing capabilities, including leveraging the Sponsor's expertise in developing marketing strategies and communications through print and electronic media. For its services, the Sponsor is entitled to a fee from the Adviser, which is calculated daily and paid monthly, based on a percentage of the average daily net assets of the Fund. The Sponsor does not act as a distributor to the Fund and does not sell shares of the Fund. The Fund is distributed through the Distributor.

The Portfolio Manager

Matthew Tuttle, Chief Executive Officer of the Adviser, has served as the Fund's portfolio manager since its inception in 2026. Matthew Tuttle has been involved in the financial services industry since 1990. He has an MBA in finance from Boston University and is the author of two financial books, *Financial Secrets of My Wealthy Grandparents* and *How Harvard and Yale Beat the Market*. He has been launching and managing ETFs since 2015.

The SAI provides additional information about the portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership in the Fund.

The Trust

The Fund is a non-diversified series of the ETF Opportunities Trust, an open-end management investment company organized as a Delaware statutory trust on March 18, 2019. The Board supervises the operations of the Fund according to applicable state and federal law, and the Board is responsible for the overall management of the Fund's business affairs.

Portfolio Holdings

A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the Fund's SAI. Complete holdings are published on the Fund's website on a daily basis. Please visit the Fund's website at www.rexshares.com. In addition, the Fund's complete holdings (as of the dates of such reports) are available in reports on Form N-PORT and Form N-CSR filed with the SEC.

DISTRIBUTION (12B-1) PLAN

The Board has adopted a Distribution and Shareholder Service Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no current plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of the Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

HOW TO BUY AND SELL SHARES

Most investors will buy and sell shares of the Fund through broker-dealers at market prices. Shares of the Fund are listed for trading on the Exchange and on the secondary market during the trading day and can be bought and sold throughout the trading day like other shares of publicly traded securities. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. Shares of the Fund are traded under the trading symbol RAM.

When buying or selling shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

The NAV of the Fund's shares is calculated at the close of regular trading on the Exchange, generally 4:00 p.m. New York time, on each day the Exchange is open. The NAV of the Fund's Shares is determined by dividing the total value of the Fund's portfolio investments and other assets, less any liabilities, by the total number of Shares outstanding of the Fund.

In calculating its NAV, the Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments.

Fair value pricing is used by the Fund when market quotations are not readily available or are deemed to be unreliable or inaccurate based on factors such as evidence of a thin market in the security or a significant event occurring after the close of the market but before the time as of which the Fund's NAV is calculated. When fair-value pricing is employed, the prices of securities used by the Fund to calculate its NAV may differ from quoted or published prices for the same securities.

APs may acquire shares directly from the Fund, and APs may tender their shares for redemption directly to the Fund, at NAV per share only in large blocks, or Creation Units, of at least 10,000 shares. Purchases and redemptions directly with the Fund must follow the Fund's procedures, which are described in the SAI.

Under normal circumstances, the Fund will pay out redemption proceeds to a redeeming AP within two (2) days after the AP's redemption request is received, in accordance with the process set forth in the Fund's SAI and in the agreement between the AP and the Fund's distributor. However, the Fund reserves the right, including under stressed market conditions, to take up to seven (7) days after the receipt of a redemption request to pay an AP, all as permitted by the 1940 Act. The Fund anticipates regularly meeting redemption requests primarily in cash, although the Fund reserves the right to pay all or portion of the redemption proceeds to an AP in-kind. Cash used for redemptions will be raised from the sale of portfolio assets or may come from existing holdings of cash or cash equivalents.

The Fund may liquidate and terminate at any time without shareholder approval.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding shares and is recognized as the owner of all shares for all purposes.

Investors owning shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Shares can only be purchased and redeemed directly from the Fund in Creation Units by APs, and the vast majority of trading in shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund’s ability to achieve its investment objective. However, direct trading by APs is critical to ensuring that shares trade at or close to NAV. The Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, the Fund imposes transaction fees on purchases and redemptions of shares to cover the custodial and other costs incurred by the Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund’s trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the shares.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. The Fund currently intends to create and redeem Creation Units in cash. Satisfying redemptions in cash may result in the Fund selling portfolio securities to obtain cash to meet net Fund redemptions which can have an adverse tax impact on taxable shareholders. These sales may generate taxable gains for the ongoing shareholders of the Fund. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund’s portfolio that could arise from frequent cash redemption transactions. In the event that the Fund redeems Creation Units in-kind, the shares’ in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, the Fund will distribute any net investment income and any net realized capital gains annually. The Fund may also pay a special distribution at the end of a calendar year to comply with U.S. federal income tax requirements.

No dividend reinvestment service is provided by the Fund. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Fund purchased in the secondary market.

Distributions in cash may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available.

Taxes

As with any investment, you should consider how your investment in shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- A Fund makes distributions,
- You sell your shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

Distributions from the Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund's dividends attributable to its "qualified dividend income" (e.g., dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other requirements), if any, generally are subject to U.S. federal income tax for U.S. non-corporate shareholders who satisfy those restrictions with respect to their shares at the rate for net capital gain. A part of the Fund's dividends also may be eligible for the dividends-received deduction allowed to U.S. corporations subject to similar requirements. However, dividends a U.S. corporate shareholder deducts pursuant to that deduction are subject indirectly to the U.S. federal alternative minimum tax. A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses affect the Fund's performance.

In general, distributions received from the Fund are subject to U.S. federal income tax when they are paid, whether taken in cash or reinvested in the Fund (if that option is available). Distributions reinvested in additional shares through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the shares in a Fund.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the shares and as capital gain thereafter. A distribution will reduce a Fund's NAV per share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

The Fund is required to backup withhold twenty-four percent (24%) of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number for individual(s) in the required manner and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of shares is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. The ability to deduct capital losses from sales of shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An Authorized Participant who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any cash it pays. An Authorized Participant who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash received. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons.

Persons exchanging securities should consult their own tax adviser with respect to whether the wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Creation Units have been held for more than one year and as short-term capital gain or loss if the Creation Units have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Creation Units you purchased or sold and at what price. See “Taxes” in the SAI for a description of the requirement regarding basis determination methods applicable to share redemptions (including redemptions of Creation Units) and the Fund’s obligation to report basis information to the Service.

At the time that this prospectus is being prepared, various administrative and legislative changes to the U.S. federal tax laws are under consideration, but it is not possible at this time to determine whether any of these changes will take place or what the changes might entail.

The foregoing discussion summarizes some of the possible consequences under current U.S. federal income tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax adviser about the potential tax consequences of an investment in the shares under all applicable tax laws. See “Taxes” in the SAI for more information.

FUND SERVICE PROVIDERS

Commonwealth Fund Services, Inc. (the “Administrator”) is the Fund’s administrator. The firm is primarily in the business of providing administrative services to retail and institutional mutual funds and exchange-traded funds.

Citi Fund Services Ohio, Inc. (“Citi”) serves as the Funds’ fund accountant, and it provides certain other services to the Funds not provided by the Administrator. Citi is primarily in the business of providing administrative, fund accounting services to retail and institutional exchange-traded funds and mutual funds.

Citibank, N.A. serves as the Funds’ custodian and transfer agent.

Foreside Fund Services, LLC (the “Distributor”) serves as the Distributor of Creation Units for the Fund on an agency basis. The Distributor does not maintain a secondary market in shares.

Practus, LLP serves as legal counsel to the Trust and the Fund.

Cohen & Company, Ltd. serves as the Fund’s independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

OTHER INFORMATION

Continuous Offering

The method by which Creation Units of shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer

or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an overallotment within the meaning of Section 4(3) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Premium/Discount Information

When available, information regarding how often the shares of the Fund traded on the Exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund will be available at www.rexshares.com.

FINANCIAL HIGHLIGHTS

Because the Fund has not yet commenced operations as of the date hereof, no financial highlights are available. In the future, financial highlights will be presented in this section of the Prospectus.

FOR MORE INFORMATION

You will find more information about the Fund in the following documents:

Statement of Additional Information: For more information about the Fund, you may wish to refer to the Fund's SAI dated June 24, 2026, which is on file with the SEC and incorporated by reference into this prospectus.

Annual/Semi-Annual Reports: Additional information about the Fund's investments, once available, will be available in the Fund's annual and semi-annual reports to shareholders and in Form N-CSR. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. In Form N-CSR, you will find the Fund's annual and semi-annual financial statements.

You can obtain a free copy of the SAI, annual and semi-annual reports, and other information, such as the Fund's financial statements, by writing to the Fund at 8730 Stony Point Parkway, Suite 205, Richmond, Virginia 23235, by calling the Fund toll-free at (833) 759-6110, by email at: mail@ccofva.com. The Fund's annual and semi-annual reports, prospectus and SAI are all available for viewing/downloading at www.rexshares.com. General inquiries regarding the Fund may also be directed to the above address or telephone number.

Copies of these documents and other information about the Fund are available on the EDGAR Database on the Commission's Internet site at <http://www.sec.gov>, and copies of these documents may also be obtained, after paying a duplication fee, by electronic request at the following email address: publicinfo@sec.gov.
